

AMENDMENTS TO THE SPECIFICATION

Please replace the Abstract with the following section:

A catheter for medical applications, suitable for being inserted into a duct comprising a first vessel and a second vessel which branches off from the first vessel. The catheter comprises a catheter body which extends from a proximal end to a distal end, a main cavity, which connects the proximal end to the distal end, and at least one opening, disposed at the distal end and suitable for perfusing a substance from the main cavity to the second vessel. The catheter, at the distal end, comprises first and second occluding devices ~~means~~ suitable for at least partially occluding the distal end so as to infuse the second vessel indirectly, creating a preferred flow of substance from the at least one opening to the second vessel.
